

Note: Mfgs who suggest that a "rib" adds structural strength to a tubular member should review their statics. The only value of a "rib" would be for shear strength; which, in a tubular member, is already supplied by the lateral wall area. Except in very thin-walled tubes, the rib material would triple it's value in the tube wall.

Post Section 1
 extrusion is weighted for strength in direction of net pull

PPS Steel Power Post Volleyball System

- X Pair - PPS End Posts
- X Qty. - #GS35 Floor Sleeves
- X Qty. - #110 Volleyball Net System
- X Pair - Ep-1 6' End Post Pad
- X Set - #PVA Net Antennas
- X Set - #PVM Boundary Markers
- X Set - Quick-Tite Net Tensioners

X REQUIRED MODEL #PPS

SCALE: NTS
